

DOĞUKAN AKIN

Backend Engineer | Node.js & TypeScript

Istanbul, Turkey | +90 (553) 930 9281 | dogukannakin@gmail.com | linkedin.com/in/dogukanakinn | github.com/dogukanakin | dogukanakin.com

PROFESSIONAL SUMMARY

Backend Engineer with **3+ years of professional experience** building production backend systems with TypeScript, Node.js, PostgreSQL, REST APIs, microservices, RabbitMQ, Docker, Kubernetes, AWS, and Azure DevOps. Experienced in secure API design, OAuth2/OIDC, RBAC, asynchronous workflows, observability, CI/CD, and incident-oriented logging. Also able to deliver product interfaces with React and Next.js when end-to-end ownership is needed.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Node.js, Python, SQL, PostgreSQL

Backend & Security: Express.js, Prisma ORM, REST APIs, microservices, RabbitMQ, OAuth2/OIDC, Keycloak, RBAC, WebSockets

Data & Reliability: PostgreSQL, database design, query optimization, asynchronous messaging, structured logging, correlation IDs, monitoring

Cloud & Delivery: Docker, Kubernetes, AWS, Azure DevOps, CI/CD, Git, Linux

Product Delivery: React, Next.js, Angular, Redux, Tailwind CSS, Jest, Supertest, Puppeteer

EXPERIENCE

Software Engineer

May 2025 – Present

AVL Turkey

Istanbul, Turkey

- Build TypeScript/Node.js microservices with Prisma ORM for a cybersecurity penetration-testing platform, using a dual-database pattern for data isolation and optimized queries across 100+ concurrent test executions.
- Design secure REST APIs with OAuth2/OIDC through Keycloak, RBAC middleware, structured logs, and correlation IDs for production incident tracking and on-call response.
- Automate delivery through Azure DevOps CI/CD and Kubernetes deployments with security contexts and zero-downtime rolling updates across 20+ production environments.
- Develop backend microservices for automotive software validation workflows, using RabbitMQ event-driven architecture, asynchronous message processing, service interfaces, and data contracts.

Founder and Full Stack Developer

September 2024 – Present

StudyAITool

Istanbul, Turkey

- Built an AI-powered educational platform from scratch, reaching 50,000+ total users and 100,000+ monthly page views.
- Develop scalable Node.js REST APIs and microservices for AI-assisted content generation and personalized learning recommendations, with optimized database queries.
- Own end-to-end product delivery with Next.js and React; improved page-load speed by 65% and increased organic traffic by 300% through SEO and content-discovery improvements.
- Operate AWS deployment, CI/CD automation, and monitoring as traffic grows; protect releases with unit, integration, and API testing.

Software Engineer

August 2023 – June 2024

SER Danışmanlık

Istanbul, Turkey

- Developed and optimized Django backend applications for noviboard.com, reducing page load time from 2.2s to 1.1s through backend, PostgreSQL-query, and caching improvements.
- Built REST APIs with authentication, validation, error handling, and documentation; containerized services with Docker and deployed them on AWS.
- Reduced deployment time by 70% through automated CI/CD workflows; maintained production backups and security configurations.

SELECTED PROJECTS

HTML to PDF Microservice | Node.js, TypeScript, Express, Puppeteer, Docker

2024

- Built a containerized Node.js/TypeScript REST API with Express and Puppeteer to convert HTML and web pages into configurable PDF output; included Docker support for scalable rendering.
- GitHub Project

React Native Heap Snapshot Analyzer | TypeScript, Node.js, CLI

2026

- Built a CLI that analyzes React Native Hermes heap snapshots with eight specialized detectors for memory leaks, cache bloat, and performance bottlenecks.
- Added Markdown and JSON output modes, severity classification, configurable thresholds, and CI/CD-friendly reporting.
- GitHub Project

EDUCATION

Maltepe University

Istanbul, Turkey

B.S. in Software Engineering

2018 – 2023
